School of Computing Sciences

Module: CMP-6012Y/6013Y/7043Y Final Year Project

Assignment: Project Portfolio (002)

Set by: Dr Mohsin Raza (e-mail: Mohsin.raza@uea.ac.uk)
Checked By: Dr Raheel Hassan
Date set: 25th September 2025
Value: 65%
Date due: 18th May 2026 by 15:00

Submission: Blackboard (report), OneDrive (additional materials)

Learning outcomes

- The ability to summarise work, that you have conducted for a substantial year-long computing or IT project, in a clear and concise report.
- Having gained experience in planning, design, implementation, testing and analysis of the solution(s) of an IT or computing related problem.
- Having gained experience of applying research and investigative methodologies to practical IT and computing applications.
- Having developed the discipline of accurate documentation and attending project progress meetings.

Specification

Overview

Production of the final report and artefacts associated with the project including programming code/developed software and perhaps other deliverables e.g. data, hardware setup. In case of the latter, since this cannot be "submitted", your report will have to cover this (images, modes of operation, etc.) as well as the Inspection/Presentation (separate brief). The final report should clearly summarise the work that you have done on the project and include sections that contain:

1. a clear introduction
2. relevant background
3. methodology/design/experimental plan…
4. implementation

5. analysis/results/outcome
6. discussion/evaluation
7. conclusion and future work.

Deliverables

A You are required to write a report for your project. The report must be:

- Formatted using appropriate MS Word or Latex Template.
- Have **no more than 40 single sided pages for the body text (including bibliography but excluding title and TOC page) and 20 pages for the appendices**.
- Submitted to Blackboard in **PDF format**.

Reports not following the above rules will be rejected.

B For projects that involve coding, the supplementary material should include your source code, an executable (if possible) and some explanation on how the application can be built. For projects with an observational element this may include raw data collected through questionnaires. In all cases you should provide a README file to explain the structure of your submission.

Marking scheme

The portfolio is composed of a report and supporting material, i.e. typically programming code and potentially data gathered during the project.

The marks obtained will depend not only on the quality of the information presented in the report but also on the quality of the material that supports it. Much of the detailed evidence of work may be contained in the supporting material. However, a good mark cannot be obtained for supporting material that is not adequately presented or summarised in the report.

The next paragraph outlines the mark distribution per report section. Note that the sections on Preparation and Implementation may vary according to your project type: build, experimental, simulation, observation and theoretical, or a mix of two or more of these. See the report template for more in depth information per section.

Marking criteria

10% Introduction

10% Background: Context and brief literature review on “essential” related work

30% Preparation: Including one or more of:

- Methodology: Explanation (and justification) of methods, algorithms, mathematical or statistical models, technologies etc. that you will implement as part of your project. These may come from an outside source (make sure you cite them) or be your own creation (make sure you avoid self-collusion).
- Design: Of a survey; of a system that consists of multiple components e.g. software (preliminary diagrams) or a physical manifestation such as an embedded system, a robot, etc.
- Experimental plan: Gathering of data; description of experiments; comparison of different methods to solve a problem in terms of speed, accuracy,
  ...

30% Implementation and Evaluation: Which may include one or more of the following:

- Development of programming code: Describe your final code architecture using for example (UML) diagrams and code snippets (make sure you explain them well in the figure captions).
- Experimental, user testing, software testing results: Report your test results using figures and tables with self-explanatory captions.
- Analyse results: Discuss your experimental and/or test findings in depth. Compare them against other studies and/or benchmarks, and point out limitations and scope for improvement.

10% Conclusion and Future Work: Briefly discuss your main findings, outcomes, results; what worked and what could have been done differently. Then summarise your work in a brief concluding statement and suggest potential future work that could be done if more time and resources would be available.

10% Quality and accuracy of writing; clearly formatted report that respects the page limits of text/appendix, i.e. 40/20 pages.

Note that your report is marked independently of any other information submitted in your portfolio (except for checking cited material and the truthfulness of claims made in the report).

Handing in procedure

1. Your report (in PDF format) needs to be submitted to the CMPP6001Y-YEAR-24E Blackboard site under Summative Assessment.

2. Create a folder on OneDrive and share it with your supervisor, the second marker and the Module Organiser (Mohsin Raza) and upload:
    - The latest (final) copy of your programming code (if relevant)
    - Data (for projects with observational element)
    - Your submitted report in PDF format (as a backup)

Plagiarism

The University takes academic integrity very seriously. You must not commit plagiarism, collusion, or contract cheating in your submitted work. Our Policy on Plagiarism, Collusion, and Contract Cheating explains:

- what is meant by the terms 'plagiarism', 'collusion', 'self-plagiarism' and 'contract cheating'
- how to avoid plagiarism, collusion, self-plagiarism and contract cheating
- using a proofreader
- what will happen if we suspect that you have breached the policy.

It is essential that you read this policy and you undertake (or refresh your memory of) our school's training on this. You can find the policy and related guidance here: https://my.uea.ac.uk/departments/learning-and-teaching/students/academic-cycle/ regulations-and-discipline/plagiarism-awareness
